Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1 and 6 rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-4 of U.S. Patent No. 6,599,364. Although the conflicting claims are not identical, they are not patentably distinct from each other because both the present application and the patent claim a single inventive concept to an applicator for applying one of a liquid and pasty application medium to at least one side of a moving fiber material web, said applicator comprising a curtain applicator unit for applying a free falling curtain of the application medium moving substantially under the force of gravity and incident on the fiber material web at a region of incidence; and a vacuum generating device for attracting the application medium from said curtain applicator unit to the moving fiber material web, said vacuum generating device being located on the side of the moving fiber material web which faces away from said curtain applicator unit, said vacuum generating device providing a vacuum generally in said region of incidence firmly attaching the medium to the fiber material web.
